

## Design/Build Process Delivers New Hangars

Buchart Horn worked as a partner with Poole Anderson Construction to Design/Build five T-hangars at the University Park Airport near State College, Pennsylvania.

Nearly 50 aircraft will be serviced in modern facilities and be sheltered from the weather in the five 12,000 square foot pre-engineered T-hangar structures. The project includes space for a Pilots' Lounge in one of the hangar bays and design of concrete aprons around each structure.

The Airport determined that the Design/Build process was the most efficient and economical method of delivering this \$2,100,000 project. The hangars were designed and constructed within 10 months.
